

ENGINEERED WOOD *Lacquered*

CARE GUIDE

Sweep & Vacuum

Sweep and Vacuum regularly to prevent debris scratching your flooring. Use hardwood vacuum attachment to avoid scuffing the lacquer

Mopping

Use a damp mop to clean with a wood floor cleaner suitable for lacquered wood. Excess water can cause swelling and damage to the topcoat. Never use steam cleaners.

Furniture

Place protective pads under furniture. Avoid dragging heavy items directly across the floor without protection.

Spills

Wipe up spills immediately. Lacquer provides a sealed surface but standing liquid can still cause damage overtime. Dry the area after spill occurs.

Avoid Chemicals

Avoid harsh chemicals and abrasives. Do not use bleach, ammonia-based cleaners, wax or abrasive scrubbing pads. Use pH-neutral wood floor cleaner.
