

POLYESTER CARPET CARE GUIDE

Vacuum

Durable carpet. Vacuum 2-3 times a week to remove dust. 3-4 times a week in high traffic areas

Cleaning

Deep clean twice a year. Use a carpet shampooer with lukewarm water and a low-moisture detergent safe for polyester. Sprinkle baking soda over the carpet monthly, let it sit for 15–30 minutes, then vacuum. To neutralize odours and refresh the pile.

Furniture

Use Carpet Protectors & Mats Prevent dirt build up and wear. Place doormats at entrances. Use rug pads or furniture coasters to reduce crushing and wear marks.

Spills

Oil-based spills can be tricky. Blot immediately with a clean white cloth. Use a carpet stain remover safe for synthetic fibres or mix of warmwater and a few drops of mild detergent. For oil stains, sprinkle baking soda first to absorb, then vacuum before spot-treating.

Chemicals

Never use bleach or high-pH cleaners — they can degrade the fibres and dull the colour. Always test cleaners in a hidden spot first.
