

# POLYPROPYLENE CARPET CARE GUIDE

## Vacuum

Durable carpet. Vacuum 2-3 times a week to remove dust. 3-4 times a week in high traffic areas

## Cleaning

Polypropylene has a low melting point, so avoid steam cleaners and hot water extraction machines unless the setting is safe for synthetic fibres.

## Furniture

Use dry carpet cleaner every 6-12 months. Ensure the cleaner is safe for polypropylene and use cold or lukewarm water only.

## Spills

Clean spills immediately! Polypropylene is water resistant but quick action helps. Dab, don't rub. Use a clean white cloth.

## Chemicals

Apply a fabric protector specifically designed for synthetic carpets to help repel future spills and make clean up easier. Test on a hidden area first.
